## **Editorial...**

*Millets' were among the first crops to be domesticated in India with several evidence of its consumption during the Indus valley civilization. Being grown in more than 130 countries at present, Millets are considered traditional food for more than half a billion people across Asia and Africa. In India, millets are primarily a kharif crop, requiring less water and agricultural inputs than other similar staples. Millets are important by the virtue of its mammoth potential to generate livelihoods, increase farmers' income and ensure food & nutritional security all over the world.*

*India produces >170 lakh ton (80% of Asia's & 20% of global production). India produces all the nine commonly known millets and is the largest producer and fifth-largest exporter of millets in the world. Most of the states in India grow one or more millet crop species. Greater millet production can support the livelihoods of smallholder farmers and can provide decent jobs for women and youth. The revenue created can boost economic growth. With the possibility of a health cereal alternative with millets, the risks associated with production shocks can be mitigated. Millets are nutritionally superior to wheat and rice due to their higher protein levels and a more balanced amino acid profile. They also contain various phytochemicals which have therapeutic properties due to their anti-inflammatory and anti-oxidative properties Government of India had proposed to United Nations for declaring 2023 as International Year of Millets (IYOM). The proposal of India was supported by 72 countries and United Nation's General Assembly (UNGA) declared 2023 as International Year of Millets on 5th March, 2021.*

*FAO Director-General QU Dongyu pointed out "This International Year is a timely reminder of this important crop. And it provides a unique opportunity to raise awareness of, and to direct policy attention to the nutritional and health benefits of millet consumption, the suitability of millets for cultivation under adverse and changing climatic conditions and creating sustainable and innovative market opportunities for many countries around the work for millets to benefit farmers and consumers globally."*
